Claude Remotion Full Prompt

Set up Remotion for me from scratch so I can make motion graphics videos. I'm a beginner and don't know coding, so do every step yourself and explain what you're doing in simple words as you go.

1. Check my computer
   - Tell me if I'm on Mac or Windows.
   - On Mac, check the macOS version. Remotion needs macOS 15 (Sequoia) or later. If mine is older, stop and tell me.

2. Install Node.js (the engine Remotion runs on)
   - Check if Node.js is installed and what version.
   - If it's missing or older than the current LTS, install the latest LTS version:
     - Mac: use Homebrew if I have it. If not, download the official installer from nodejs.org.
     - Windows: use winget (OpenJS.NodeJS.LTS).
   - If any step needs my computer password or admin approval, don't try to get around it. Tell me exactly what to type or click, and wait for me.
   - After installing, confirm that "node -v" and "npm -v" both work.

3. Create the Remotion project
   - In this folder, run: npx create-video@latest --yes --blank my-motion-graphics
   - If a folder with that name already exists, ask me before touching it.
   - Go into the project and install dependencies if they aren't already installed.

4. Install Remotion's official skills for Claude
   - Check that the project has Remotion's agent skills (in .agents/skills or .claude/skills).
   - If they're missing, run: npx remotion skills add

5. Test that everything works
   - Create a simple 3-second test animation that says "Setup complete ✓" fading and scaling in on a dark background.
   - Render it to out/test.mp4. The first render may download a browser component, which is normal.
   - Start Remotion Studio and open it in the Preview pane so I can see it.

6. When it's done, give me a short summary:
   - The full path to my project folder
   - Where my rendered videos will be saved
   - Anything that failed and how to fix it
   - A reminder to start a new session in this app with the "my-motion-graphics" folder selected, so Claude loads the Remotion skills before I make my first real animation
