PREMIUM AFTER EFFECTS

E-commerce & Social Promo Editing Analysis

Effects • Motion Graphics • Editing Workflow • Sound Design • Reference Screenshots

Prepared from the three uploaded MP4 clips and the two YouTube reference links supplied by the user.

Important scope note: the uploaded clips were inspected frame-by-frame for visual techniques and representative screenshots. The YouTube pages could not be fully inspected for their complete video/audio streams in this session. One link resolves in search to *“How to edit Viral Reels in After Effects (COMPLETE Guide)”*; the other link’s title/content could not be verified. Therefore, the report separates visible observations from recommended workflows and does not pretend to identify exact proprietary sound-library IDs from audio that could not be isolated reliably.

Report date: 28 October 2026

1. Executive summary

The uploaded examples use a polished vertical-ad language: presenter-led footage, product/property inserts, bold Bengali kinetic typography, branded overlays, rounded picture cards, cutout/composite layouts, and clean end-card/contact moments. The strongest shared lesson is to make every visual change support the spoken message, while using sound effects sparingly to make those changes feel intentional.

Observed across the three supplied clips

Area	What is visible
Presenter footage	Talking-head / spokesperson footage, mid and full shots, expressive gestures, green outdoor backgrounds, and deliberate pauses for text.
Kinetic typography	Bengali headline words appear in sync with speech; key words use high contrast, outline/shadow and scale emphasis.
Picture-in-picture / cards	Property photos, calendar/app mockups, product pack shots and phone/profile mockups appear as separate visual panels.
Branding & CTA	Persistent corner logos/watermarks, contact details, phone/WhatsApp-style call-to-action, and a closing branded frame.
Transitions	Hard cuts between presenter and graphics, layered card reveals, zoom/scale movement, and a conspicuous radial/warp transition in the Habiganj clip.
Colour and finishing	Strong greens and bright text colours, soft background separation, contrast enhancement, and a consistent promotional palette.

2. Uploaded clip breakdown with screenshots

Uploaded Video A — Prop Tale real-estate promo

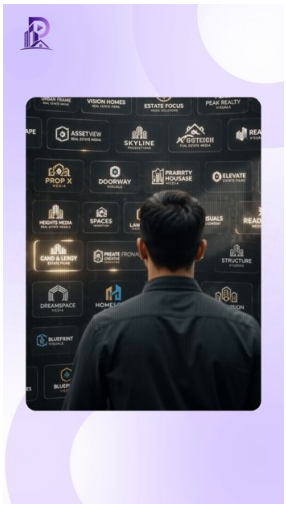

Duration: 48.3 seconds • Format: vertical 9:16 • Source: uploaded file **1.mp4**

Approx. 2s

Approx. 12s

Approx. 24s

• Real-estate presenter promo. Alternates full/medium presenter shots with mobile browsing, property photo cards, a meeting scene, grid of past work, and a final Prop Tale logo frame.

• Useful skills to recreate: masking/cutout, motion-tracked or hand-animated floating cards, rounded-rectangle mattes, staggered reveals, kinetic Bengali captions, subtle push-ins, and a clean brand end card.

• Editing rhythm: keep the presenter as the narrative anchor; cut to proof visuals when a claim is mentioned; return to the presenter for emotional emphasis; finish with brand recall.

Uploaded Video B — Habiganj Express promo

Duration: 53.6 seconds • Format: vertical 9:16 • Source: uploaded file **HABIGANJ 01 PREVIEW.mp4**

Approx. 2s

Approx. 13s

Approx. 27s

• Presenter-led service promo with large Bengali headline words, calendar and food-delivery graphics, a logo/profile mockup, contact CTA, and a colourful radial transition near the later section.

• Useful skills to recreate: text animation presets refined by hand, shape-layer callouts, icon/logo reveals, screen/mockup replacement, motion blur, and a radial zoom/warp transition used as a punctuation beat.

• Potential improvement: the repeated diagonal preview watermark obscures content; for a final export, use a clean master without preview watermark and check spelling, safe margins and text legibility on mobile.

Uploaded Video C — Herbal product promo

Duration: 98.2 seconds • Format: vertical 9:16 • Source: uploaded file **snapsave-app_1403214898578500_hd.mp4**

Approx. 2s

Approx. 25s

Approx. 49s

• Herbal product advertisement with a spokesperson, isolated bottle hero shots, symptom/benefit text, a lifestyle cutaway, product overlays and a final WhatsApp/contact CTA.

• Useful skills to recreate: product cutout and shadow, shallow-depth-of-field background, picture-in-picture overlays, lower thirds, product scale emphasis, match cuts, and consistent contact branding.

• Compliance note: health-related claims in the source visuals should be substantiated and reviewed before commercial use; avoid presenting a product as a proven treatment without appropriate evidence and approval.

3. After Effects effects & techniques checklist

The following are the most relevant techniques suggested by the visible edits. Some are directly observable as results; the exact underlying effect/plugin cannot be confirmed from a rendered MP4 alone.

Technique	Tools / skills	Application
Kinetic typography	Text Animator: Position, Scale, Opacity; Range Selector; per-word/per-character reveal; overshoot; tracking animation; drop shadow/stroke.	Speech-synced Bengali keywords; use 6–12 frames for quick reveals and 8–16 frames for calmer text.
Shape-layer cards	Rounded Rectangle paths, Trim Paths, Fill/Stroke, layer parenting, staggered position/scale keyframes.	Build property/photo panels, callout bars, and CTA capsules.
Masking & compositing	Roto Brush 2 / masks, feather, track matte, Refine Edge, spill suppression where needed.	Separate the presenter/product from the background and layer graphics behind or beside them.
Motion design	Easy Ease, Graph Editor, overshoot, anticipation, anchor-point control, motion blur.	Avoid linear movement; use a quick start, smooth settle and a small overshoot only where stylistically appropriate.
Camera / depth	2.5D layers, camera push-in, parallax, scale animation, depth-of-field simulation.	Give static photos a subtle sense of movement; do not over-animate evidence imagery.
Transitions	Scale/position whip, directional blur, radial zoom/blur, masked wipes, match cuts.	Reserve the strongest transition for a section change or end beat; do not use a transition on every cut.
Screen / mockup inserts	Corner Pin or Mocha AE, masks, track, precomps, reflections and subtle blur.	For phone/profile mockups, track the screen plane and keep screen content sharp enough to read.
Product hero shot	Mask/rotoscope, shadow catcher or faux shadow, glow kept subtle, scale pop, light wrap.	Use a clean pack shot, controlled highlights and a grounded shadow rather than excessive glow.
Colour finishing	Lumetri Color (Premiere) or Curves/Levels in AE, selective saturation, skin-tone protection, vignette used lightly.	Keep skin natural while matching greens, whites and brand colours across shots.
Finishing & export	Precomps, naming conventions, motion blur, 1080×1920 comp, 25/30 fps to match source, H.264 delivery.	Check text safe areas, watermark removal, logo integrity, spelling and mobile legibility.

4. Sound design: names, placement & reference codes

Important: the codes below are **report reference IDs** (SFX-01, etc.), not original asset IDs from a sound library. A rendered MP4 does not reveal the source filename or library catalogue number. Because the two YouTube streams could not be fully isolated for listening here, these are recommended sound categories and placement notes to reproduce this style—not claims that the exact sounds are present in the originals.

Ref ID	Suggested searchable SFX name	Where to place it	Mixing note
SFX-01	Soft whoosh / short airy swipe	Text or card slides in	Short, bright, low-mid body; trim to the movement; keep below dialogue.
SFX-02	UI pop / soft pop	Headline, icon or rounded card appears	Tiny transient; use on the first frame of the reveal, not continuously.
SFX-03	Low impact / muted thump	Large keyword or product hero lands	Pair with scale settle; avoid boomy bass on every word.
SFX-04	Subtle riser / reverse swell	Transition into a new section or hero shot	0.4–1.2 s rise; duck music slightly if the voice needs space.
SFX-05	Whoosh + impact combo	Radial zoom / whip transition	Whoosh leads by a few frames; impact lands at the visual peak.
SFX-06	Digital UI click / tap	Phone, app or contact button cue	Very short and quiet; only when a visible interface action occurs.
SFX-07	Camera shutter / photo tick	Property image or proof-photo grid reveal	Optional; use sparingly to suggest gallery selection.
SFX-08	Soft logo shimmer / tonal sparkle	Logo/end-card reveal	High-frequency detail, short tail; do not mask the brand name.
SFX-09	Ambient outdoor bed	Outdoor presenter footage	Low-level birds/air/wind only if it fits the scene; avoid distracting loops.
SFX-10	Music transition / downlifter	End of a section or CTA arrival	Short tonal fall; align to edit point and leave the spoken CTA clear.
SFX-11	Warm confirmation chime	WhatsApp/contact CTA or final callout	Friendly, simple two-note cue; not a notification imitation if it could mislead.
SFX-12	Room tone / dialogue ambience	Between dialogue edits	Use to smooth cuts; remove handling noise and harsh wind where possible.

Sound editing workflow

1. Dialogue first: clean noise, even out levels, use gentle EQ/compression, and keep words intelligible on a phone speaker.

2. Music second: choose a track whose beat supports the cut rhythm; duck music under voice and avoid sudden level jumps.

3. SFX third: place transient effects on actual visual events (text landings, card reveals, button actions and transitions).

4. Mix check: compare at low volume and on phone speakers; keep effects clearly below speech. Avoid stacking whoosh + impact + click on every single event.

5. Final loudness: use a loudness meter and platform-appropriate target; avoid clipping and preserve true peak headroom. Do not rely on peak normalization alone.

5. Example timing map for a 45–60 second promo

Time	Visual beat	Sound idea
0:00–0:03	Hook / first headline	Music starts clean; one short whoosh or impact on headline.
0:03–0:12	Presenter explains the problem	Dialogue remains dominant; only subtle text pops.
0:12–0:25	Proof / service / product inserts	Soft swishes on card entrances; optional photo ticks.
0:25–0:38	Benefits and key claims	Low impact on the most important keyword; keep the music steady.
0:38–0:50	Brand proof / presenter return	Gentle riser into strongest visual; no unnecessary transition stack.

Time	Visual beat	Sound idea
0:50–end	CTA and logo	Short UI tap or warm chime; music resolves, logo shimmer if appropriate.

6. Practical After Effects workflow

01 — Organise

Create folders: Footage, Audio, Graphics, Precomps, Exports. Rename assets clearly and keep the source clips untouched.

02 — Build the edit

Match comp dimensions and frame rate to the footage. Assemble the story and dialogue timing before polishing motion.

03 — Typography system

Choose two fonts maximum; create a consistent hierarchy for headline, supporting copy and CTA. Use text animators and shape backplates.

04 — Reusable graphics

Build cards, phone frames, lower thirds and contact pills as precomps. Use Essential Properties where reuse is needed.

05 — Composite

Roto/mask presenter or product only where the design needs separation. Refine edges and check hair, hands and motion blur.

06 — Animate

Use Easy Ease and the Graph Editor. Keep movement purposeful; align scale/position settles to the audio transient.

07 — Sound pass

Label dialogue, music and SFX on separate tracks. Use markers at key visual events and fade every music/SFX tail deliberately.

08 — QC & export

Review frame-by-frame for bad masks, jitter, clipping, spelling, logo distortion, unsafe text edges and watermark artifacts. Export H.264 at 1080×1920.

7. Reference links and limitations

Reference 1: https://youtu.be/ulcyc8yD2Bo — title and full audio/video could not be verified from accessible page data in this session.

Reference 2: https://youtu.be/3zQcRtCe-xs — search results identify it as “How to edit Viral Reels in After Effects (COMPLETE Guide)”; full playback/audio was not available for exact time-coded analysis.

This document includes screenshots extracted from the three uploaded videos. It does not include screenshots of the YouTube players because the pages did not provide accessible frames in this session. To identify exact original SFX names and library code numbers, provide the sound pack/catalogue or a downloadable clean audio track plus a source library reference; otherwise only descriptive sound categories can be identified responsibly.

Suggested follow-up for a truly exact sound map: provide the original project file (.aep), isolated SFX/music stems, or the names of the sound-effect library used. Then each cue can be mapped to exact timeline timecodes and source filenames.

ADDENDUM — NEWLY UPLOADED VIDEO

Source: snapsave-app_1552663953014547_hd.mp4 • Duration: 46.0 seconds

This addendum extends the earlier report with representative screenshots and an editing/sound-design checklist. Exact plugin names and original sound-library catalogue IDs cannot be determined from a rendered MP4 alone.

After Effects technique checklist

Use the following as reconstruction techniques when supported by the visible event; these are not claims about the original project file.

Ref	Skill	Approach
T-01	Kinetic typography	Text Animator: Position/Scale/Opacity; Range Selector; per-word timing; stroke/shadow.
T-02	Card/product reveal	Shape layers, rounded rectangles, track mattes, parented transforms, staggered keyframes.
T-03	Presenter/product cutout	Roto Brush 2 or masks; refine edges; inspect hair, hands and motion blur.
T-04	Motion polish	Easy Ease, Graph Editor, controlled overshoot, anchor-point control and motion blur.
T-05	Transitions	Directional blur, masked wipe, scale/position whip or radial blur if visually appropriate.
T-06	Colour finishing	Curves/Levels, selective saturation, natural skin tones, consistent brand colours.
T-07	Export QC	Check safe text margins, spelling, logo fidelity, flicker, clipping and 1080×1920 output.

Sound-effect reference codes

These are descriptive report codes, not original library IDs. Use them to organize a manual listening pass and align cues to visible events.

Ref code	Searchable sound name	Suggested placement
NEW-SFX-01	Soft whoosh	Card or headline slides in
NEW-SFX-02	UI pop / short click	Icon, label or interface element appears
NEW-SFX-03	Muted impact	Large keyword or product lands
NEW-SFX-04	Short riser	Build into a major reveal
NEW-SFX-05	Whoosh + impact	Fast zoom/whip transition
NEW-SFX-06	Logo shimmer / tonal sparkle	Brand end-card reveal
NEW-SFX-07	Room tone / ambience	Smooth dialogue edits

Exact sound names and catalogue numbers require the original After Effects project, isolated SFX stems, or the sound library/pack used. A mixed MP4 generally does not expose source filenames or catalogue codes.
