ANALYSIS AND PLAYBOOK

Bangla promo reel editing: what six reference edits teach

A shot-by-shot, sound-by-sound reading of six Bengali brand and product reels, distilled into a style you can reuse: structure, pacing, captions, transitions, graphics, branding, audio, and fill-in templates.

6
videos analysed frame by frame, caption by caption, and by their audio

36
editing skills identified, each tied to where it was seen

12
linked videos that could not be opened from here (see last page)

Prepared 28 Oct 2026 · References are labelled R1–R6 throughout. Numbers marked “measured” come from the files; “inferred” means a best reading to confirm.

SCOPE

What this is based on

Six videos were available to the analysis: five attachments and one video pulled from the Drive folders. Everything in this document comes from them.

	SUBJECT	FORMAT	FPS	LENGTH	BRAND LAYERS SEEN	SOURCE
R1	**Subscription promo**	1:1 · 720×720	30	56 s	Crowned app logo, phone mock-up of a seller page	Google Drive: “Capcut Promotional Video.mp4”
R2	**Career-book promo**	3:4 · 720×960	30	46 s	Book mock-up, ORDER NOW pill	Attached: Book_01.mp4
R3	**Herbal product ad**	9:16 · 720×1280	30	98 s	WhatsApp pill + number watermark, round logo	Attached: snapsave-app_1403214898578500_hd.mp4
R4	**Detox-tea ad**	1:1 · 720×720	24	111 s	Wordmark bug top-right, logo end card	Attached: Bengali-named .mp4
R5	**Agency pitch**	1:1 · 720×720	25	54 s	Agency bug top-right	Attached: AQNclGo5… .mp4
R6	**Oils brand intro**	1:1 · 1080×1080	25	76 s	Agency bug top-left, client logo top-right	Attached: SnapSave_App_838312429287106_1080p.mp4

How each video was analysed

- **Cuts, flashes, dips and dissolves** detected from frame-to-frame change on every frame.
- **One-frame-per-second contact sheets** read by eye for all six videos, plus frame strips around each transition.
- **Speech pauses** measured in 10 ms steps; **loudness** measured to EBU R128 (integrated LUFS, range, peak).
- **Spectrograms** inspected around graphics, flashes and end cards to look for sound effects and music.
- **Punch-ins** measured by matching background features across each cut.
- **A-roll share** counted by hand from the sheets (the automatic classifier mislabelled one video; see corrections).

Limits to keep in mind

- The files are recompressed downloads (0.65–2.7 Mbps). Their bitrates and resolutions are not export specs.
- Audio was judged from spectrograms and signal statistics, not by listening. Sound-effect types are inferred; exact effect or music names are unknown.
- Fonts cannot be identified from video. Caption text is described, not retyped.
- Six videos show a house style, not a law. Where two refs disagree, both are reported.

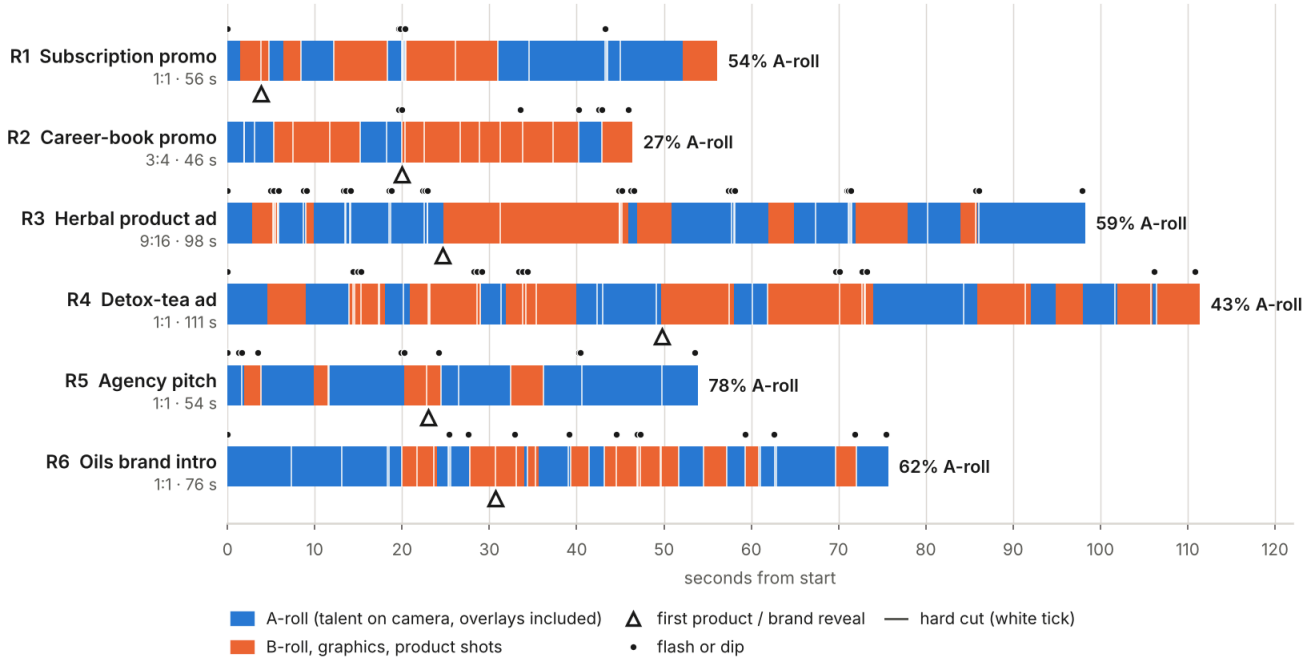

Not analysed

- 12 Facebook links in your text file.
- The YouTube link and the six Facebook links sent earlier.
- Two Drive videos over the connector’s 10 MB limit (13.7 MB and 85.7 MB). The “Indoor Advance Premium” folder is empty.

OVERVIEW

The six edits at a glance

Blue is talent on camera, orange is everything else. Each white tick is a hard cut. Triangles mark the first product or brand reveal.

Shot structure. A-roll intervals are hand-counted from the contact sheets (±0.5 s); cuts, flashes and dips come from the frame-difference detector.

REFERENCE	SHOTS	CUTS/MIN	MEDIAN SHOT (S)	A-ROLL	REVEAL AT	MEDIAN PAUSE (S)	LUFS
R1 Subscription promo	21	22.5	1.7	54%	7%	0.18	-14
R2 Career-book promo	22	28.5	2.08	27%	43%	0.17	-14.1
R3 Herbal product ad	47	28.7	1.66	59%	25%	0.18	-14.1
R4 Detox-tea ad	61	32.9	1.05	43%	45%	0.15	-14.4
R5 Agency pitch	21	23.4	2.2	78%	43%	0.19	-14.1
R6 Oils brand intro	29	23	2.12	62%	41%	0.18	-14.2

What repeats across all six

- 22–33 shots a minute, with something changing on screen at least every 2.5 s.
- Speech trimmed hard: median pause 0.15–0.19 s, 90th percentile under 0.6 s.
- Two-tier keyword captions, kinetic entrances, colour matched to the background.
- Every video masters to about −14 LUFS and is voice-forward.

Where they differ

- **Reveal timing:** 41–45% of runtime in four videos (R2, R4, R5, R6); brand-first at 7% (R1); 25% in R3.
- **Framing:** R2, R4 and R6 alternate wide and tight crops; R3 and R5 hold one framing.
- **Talent share:** from 27% (R2, graphic-led) to 78% (R5, talent-led).
- **Ending:** R3 has a full CTA stack, R4 a logo end card, R5 and R6 end on talent.

HOOK ANATOMY

The first four seconds

Frames at 0, 0.5, 1, 1.5, 2, 2.5, 3 and 4 s for each reel. Five of the six put a caption or graphic on screen within about a second; the talent is on camera from frame 0 in every one.

R1

R2

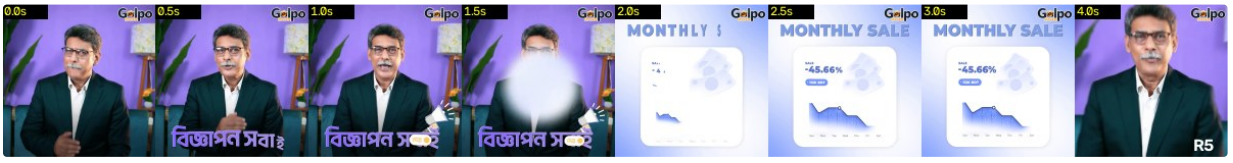

R3

R4

R5

R6

	FIRST ELEMENT	WHAT IT IS	CONTEXT
R1	0.5 s	Small device labels under the talent (Android, iPhone, then PC)	First caption at 2.0 s, “even on a MacBook” (gloss); talent and labels only before that
R2	about 0.5–1.0 s	White lead-in, then a red key phrase: everyone wants career success	Talent holding the book from frame 0
R3	by 0.5 s	Green key caption “Diabetes” with a white sub-line and red burst marks	Contact pill and number watermark already on from frame 0
R4	4.0 s	Yellow question caption: “Will you survive?” (gloss)	Four seconds of talent alone; the only reel without an early caption
R5	0.5 s	Violet key caption with a megaphone sticker: everyone runs ads	White flash at 1.5 s into a falling-chart card at 2 s
R6	0.5 s	Neon caption typed in word by word: “What a hassle” (approximate gloss)	Second caption at 2.0 s; two logo bugs on from frame 0

Hook rules to copy

- No pre-roll or logo card: the person is speaking in frame 0.
- A keyword caption or graphic lands by about 1 s and names the viewer’s problem.
- One visual surprise before 3 s (a flash into a chart card, a sticker, a type-on).

Where it is thinner

- R4 holds four seconds of talent alone, which shows what a hook without a caption looks like; it works only because the opening line is a direct question.
- Caption wording here is a plain-English gloss, not a transcript.

SKILL INVENTORY

36 editing skills identified

Each skill is something an editor does deliberately. The right column lists which references show it.

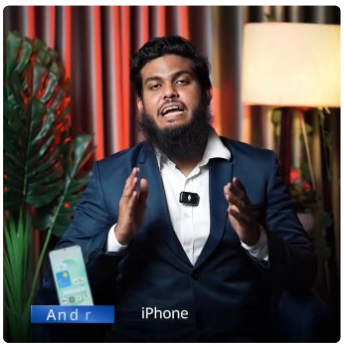

STRUCTURE AND PACING	
Cold open: talent on screen from frame 0, first caption or graphic within about 1 s	R1 (labels 0.5 s), R2, R3, R5, R6; not R4 (first caption at 4 s)
Hook as a question or a pain statement	R2, R3, R4, R5, R6
Cut-rate control: 22–33 shots a minute, a change at least every 2.5 s	All
Tight speech trimming: median pause 0.15–0.19 s	All
Reveal timing: product or brand at about 41–45% of runtime	R2, R4, R5, R6
PICTURE	
Punch-in alternation at jump cuts (about 1.06–1.30×)	R2, R4, R6
Constant framing with variety from overlays instead of crops	R3; R5 (one pull-back)
B-roll that shows the spoken noun, about 2 s a clip	R2, R3, R4, R6
Slow drift or push on stock and still shots	R2, R4
Product beauty shot on a seamless backdrop	R3, R4, R6
Product roll-call beat (mention, title pop, beauty shot)	R6
Product inset over talent with a lower-third label	R4
Behind-the-scenes monitor footage, screen-in-screen	R5
GRAPHICS AND UI	
2D vector explainer clips on flat colour	R2, R5
3D inserts: rotating book, coin podium, particles, card carousel	R2, R4, R5
Phone and social-feed mock-ups	R1, R5
UI micro-elements: toast pill, loader bar, cursor click, chart card	R1, R5
Chip stacks timed to spoken list items	R1, R4, R6
Plan or offer badges and certification callouts	R1, R4
Pill labels with colour dots (real / fake, product type)	R5, R6
CAPTIONS	
Two-tier keyword captions (small lead-in, large key phrase)	All
Kinetic entrances (word-by-word, typed, fade-up) and a smear exit	R1, R3, R4
Background-adaptive caption colour (six looks)	All
Sticker or burst emphasis (helmet, burst lines, megaphone, slash)	R2, R3, R5, R6
TRANSITIONS	
White or warm flash, light-leak	R1, R3, R4, R5, R6
Iris wipe; dip to dark	R2; R1
Colour-band wipe	R3
Radial zoom-blur whip	R4
Cross-dissolve and lens-flare dissolve	R3, R4
Strobe flicker	R1
BRANDING AND CTA	
Brand bug, contact pill, tiled watermark	R3, R4, R5, R6
CTA stack: button, form card, contact pill	R3 (full), R1, R2 (button)
Logo sting and end card	R6 (sting), R4 (end card)
SOUND	
Loudness mastered to about −14 LUFS, voice-forward mix	All
Sparse tonal pings near graphics	R5 (tones visible, timing suggestive), R1 (weak)
Sustained pad under an end card	R4

EDIT BREAKDOWN · R1

Subscription promo

1:1 · 720×720 | 30 fps | 56 s | 21 shots · 22.5 cuts/min | A-roll 54% | reveal at 7% | median pause 0.18 s | -14 LUFS

Brand-first. The product logo lands at 3.8 s (7% of runtime); everything after is an offer pitch built from short talent shots and graphic cards.

0.5 s · Hook: talent on screen from frame 1

4.2 s · Logo reveal on navy

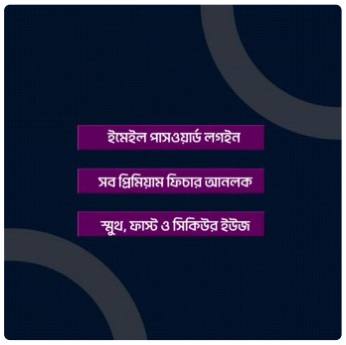

6 s · Two-tier neon caption

8.5 s · Phone mock-up as proof

16.5 s · Screen B-roll with icon chips

28.5 s · Three benefit chips

36.5 s · Plan badges

51.5 s · CTA: ORDER NOW + cursor

TIME (S)	ELEMENT	WHAT HAPPENS AND HOW IT IS TREATED
0.0–1.4	**Hook**	Talent in a navy-suit set, no pre-roll. Small device labels pop in under the talent: Android and iPhone from 0.5 s, PC by 1.5 s. The first caption follows at 2 s.
1.4–4.7	**Graphic cards**	Dark navy card with a gold caption, a laptop mock-up slides in, then the crowned app logo on navy (hard cut at 3.8 s).
4.7–6.4	**First caption**	Back to talent. “CapCut Pro” types in letter by letter; a gold second tier fades in beneath it.
6.4–8.4	**Dip + proof**	Fade through dark to a phone mock-up of the seller’s page (social proof).
8.4–12.2	**Offer line**	Two-tier caption rises with a purple glow: the 1-year plan is the best offer of the year.
12.2–18.3	**Use-case B-roll**	Editor at a desk. Yellow boxed caption, then three icon chips (effects, transitions, tools) appear one per second.
19.9–20.4	**Strobe flicker**	Warm overexposed flicker into a new person; neon script “Creative” follows.
22.9–30.9	**Benefit graphics**	Logo with “Official” and “Official Subscription” labels, then three purple bullet chips stacked.
30.9–52.2	**Talent + badges**	Neon caption; three round plan badges (1 month, 6 months, 1 year) from 35 s; offer lines; a limited-time line at 48–49 s.
50–56	**CTA + end card**	App icon, ORDER NOW pill and a cursor click (50–52 s). Dark transition to a phone mock-up end card (53–56 s).

Take from it

- Use a dip to dark before any phone or UI mock-up (6.4 s).
- A chip stack mirrors the spoken list: one chip per item, about one second apart.
- Round plan badges give the price structure at a glance without a price table.

Watch out

- The neon glow sits over a dark suit; keep the key phrase clearly brighter than the lower tier for mobile screens.
- The only video where the brand appears before the problem; it suits a known product, not a cold audience.

EDIT BREAKDOWN · R2

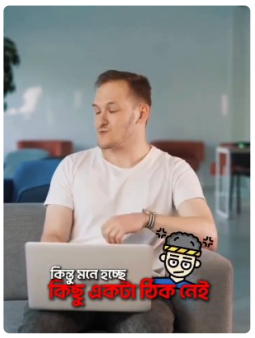

Career-book promo

3:4 · 720×960 | 30 fps | 46 s | 22 shots · 28.5 cuts/min | A-roll 27% | reveal at 43% | median pause 0.17 s | -14.1 LUFS

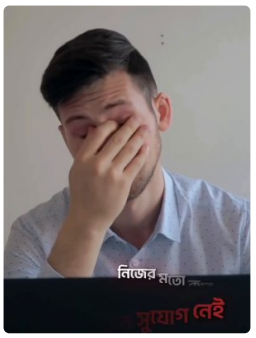

Problem-first. About 15 s of empathy and pain, a question at 15 s, then the book arrives through an iris wipe at 20 s (43% of runtime).

1.2 s · Hook caption: white lead, red key

9 s · Stock B-roll + sticker burst

13.2 s · Pain beat, tight close-up

21 s · Book mock-up after iris wipe

24.5 s · 2D vector explainer

29.5 s · Vector + 3D CAREER lettering

36 s · 3D podium + coin stack

45 s · CTA: ORDER NOW pill

TIME (S)	ELEMENT	WHAT HAPPENS AND HOW IT IS TREATED
0.0–5.3	**Hook**	Talent with the book on the desk. White lead-in over a red key phrase from 1.0 s: everyone wants career success, few know which work truly suits them.
5.3–15.2	**Pain montage**	Stock B-roll: man on the phone walking to the office, man at a laptop, head in hands. About 2 s per clip, one caption per clip. A cartoon helmet sticker with burst lines lands on “something feels off” (9 s).
15.2–20.0	**The question**	Back to talent: “is this work really for me?” in white over red, large and tight.
20.0–23.0	**Book reveal**	Iris wipe to a rotating 3D book on light grey.
23–34	**Vector explainers**	Flat-colour clips: multi-armed worker, ladder, rising arrow with 3D “CAREER” lettering, caped hero. Each carries a blue outlined caption.
34–38	**Money beat**	Blue podium with a coin stack rising: where to invest time, money and energy.
38–40	**Book + magnifier**	The book under a magnifying glass.
40.3–42.9	**Close**	Talent with a green key caption: this will help you find your successful career.
42.9–46.4	**CTA**	Book on light grey, text slides across, ORDER NOW pill with a down chevron.

Take from it

- Pain montage: one clip per phrase, about 2 s each, with a caption on every clip.
- Caption colour follows the background: red on neutral, blue on cream, black on light blue, green on dark.
- Punch-ins at the 1.9 s and 3.1 s cuts (about 1.14× and 1.06×) keep a static talking head alive.

Watch out

- Lowest A-roll share (27%): the vector clips carry the message, so voice-over and caption copy must be clean.
- The 3D CAREER lettering is cropped at the frame edge on purpose; check that it is legible on a phone.

EDIT BREAKDOWN · R3

Herbal product ad

9:16 · 720×1280 | 30 fps | 98 s | 47 shots · 28.7 cuts/min | A-roll 59% | reveal at 25% | median pause 0.18 s | -14.1 LUFS

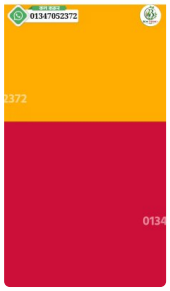

Fear, then remedy. Warning visuals first, product at 24.6 s (25%), a claims card at 36 s, and the longest CTA of the six.

1.5 s · Hook caption, green key

5 s · Red alert B-roll

9 s · Colour-band wipe

22 s · Ingredient sticker

28.5 s · Product on grass + claim

40 s · Teal text card + B-roll

93 s · Form card (CTA)

97 s · WhatsApp pill

TIME (S)	ELEMENT	WHAT HAPPENS AND HOW IT IS TREATED
0–9	**Hook**	Talent holding the bottle. WhatsApp pill and round logo are on from frame 0. Green key caption with red burst marks; stock B-roll with a red alert frame and “!” icon (3–5 s).
9.0	**Colour-band wipe**	White, amber and crimson bands wipe through to talent.
9–24	**Authority talk**	Talent with caption lines; lens-flare dissolve at 14 s; a fig-fruit sticker pops in at 22 s.
24.6–35	**Product reveal**	Bottle on a bamboo stump, title builds word by word; cut to the bottle on grass with a “three months” caption.
35.7–45	**Claims card**	A teal text panel holds at the bottom while B-roll changes above (loose jeans, glucose meter, artery, tired man).
45	**Second band wipe**	Same wipe to talent in a new outdoor location.
62–64	**B-roll**	Finger-prick close-ups with a “diabetes problem” caption.
72–78	**Product beat**	Bottle on stump, then on grass, dissolve back to talent.
91–98	**CTA stack**	ORDER NOW pill (91 s), form card with name, address and phone fields (92–94 s), then a large WhatsApp pill with the number (95–98 s).

Take from it

- A persistent contact layer (pill + number + logo) from frame 0 makes the CTA feel earned at the end.
- A lens-flare dissolve at 57.6 s hides a jump cut inside talent footage.
- A three-step CTA stack (button, form card, contact pill) over the last 7 s.

Watch out

- Strong health claims (a condition under control in three months, a condition leading toward death). Do not reuse without substantiation and an ad-policy check.
- A faint tiled phone-number watermark drifts across the frame and cuts across the face area at times.

EDIT BREAKDOWN · R4

Detox-tea ad

1:1 · 720×720 | 24 fps | 111 s | 61 shots · 32.9 cuts/min | A-roll 43% | reveal at 45% | median pause 0.15 s | -14.4 LUFS

Long-form explainer. 45% of the runtime builds the problem before the jar appears at 49.8 s; the highest cut rate of the six.

4.2 s · Hook question, yellow caption

6 s · Split-screen food montage

14.2 s · Condition B-roll + big label

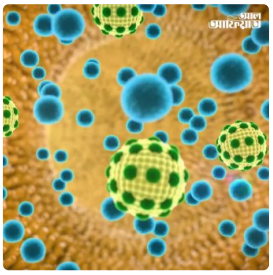

34 s · Light-leak between symptoms

52 s · Product reveal

61.5 s · Certification caption

66.5 s · 3D particle animation

108.5 s · End card: logo on white

TIME (S)	ELEMENT	WHAT HAPPENS AND HOW IT IS TREATED
0–4.6	**Hook**	Talent, wordmark bug top-right. Yellow question caption at 4 s (will you survive?), exit smear at 4.45 s.
4.6–9	**Radial blur**	Zoom-blur whip into a split screen of burger and fried snacks; captions on fast food and chemical-laden eating.
14–29	**Condition B-roll**	Illustrations with huge labels (fatty liver, type 2 diabetes, cirrhosis, “even liver cancer!”), a hospital bed, a feast cross-dissolving into a man clutching his chest.
32–40	**Symptom montage**	Stomach pain, sleeplessness, headache, desk fatigue; warm light-leak at 34 s.
40–49.7	**Talent + contact**	Red-orange two-tier caption with a rule; a WhatsApp number pill types in at 44 s.
49.7–58	**Reveal**	Cross-dissolve to a dark-green jar, steam and tea cup; bowls of ingredients (made from herbal and mineral ingredients).
58–62	**Inset + proof**	Talent with the jar as a lower-left inset and a heavy label; italic yellow “ISO Certified Lab Tested” caption.
62–73	**Proof B-roll**	Jar on a stone plinth, 3D particle animation, symptom close-ups, orange flash at 72.8 s.
75–77	**Chips**	Product and box chips appear lower-left with labels (cane vinegar, diet chart).
86–106	**Close**	Liver-doodle B-roll, talent, ambulance B-roll, jar push-in (102–106 s).
106.5–111.4	**End card**	Logo on white pops, then holds about 5 s over a quiet pad.

Take from it

- Median shot 1.05 s: the fastest cutting of the set. Reserve it for B-roll montages; keep talent shots near 2–3 s.
- Product inset over talent with a lower-third label (58–62 s, 75–77 s) introduces items without leaving the speaker.
- A five-second logo hold with a pad gives the ending room.

Watch out

- Severe health language (cancer, cirrhosis). Same substantiation and policy caution as R3.
- The first caption arrives at about 4 s, later than the other five; the opening 4 s relies on talent alone.

EDIT BREAKDOWN · R5

Agency pitch

1:1 · 720×720 | 25 fps | 54 s | 21 shots · 23.4 cuts/min | A-roll 78% | reveal at 43% | median pause 0.19 s | -14.1 LUFS

Talent-led pitch with UI proof: 78% A-roll. The “product” is the agency’s own service, shown through mock-ups and a card carousel.

1.4 s · Hook: megaphone sticker

3.4 s · UI chart card

5.6 s · Phone mock-up in corner

10.5 s · 2D vector character

17.3 s · Toast pill + cursor

24 s · Real / fake product tags

34 s · Behind-the-scenes monitor

45 s · 3D card carousel

TIME (S)	ELEMENT	WHAT HAPPENS AND HOW IT IS TREATED
0–1.9	**Hook**	Talent on a violet set with the agency bug. Megaphone sticker and violet key caption from 1 s: everyone runs ads.
1.9–3.9	**UI chart card**	A “MONTHLY SALE” chart card draws a falling line (−45.66%).
3.9–9.9	**Punch-in + phone**	Fast punch-in; a social-feed phone mock-up slides in at the right edge. Caption: they stop only at those ads.
9.9–11.6	**Vector**	Flat character holding a tablet on a violet gradient, with a dip to dark.
11.6–20.2	**Talent + UI**	A “Complete Order” toast pill with a cursor click (17 s), then a loader-bar pill (18–20 s).
20.5–24.5	**Social proof**	Phone in hand showing a feed; a product bottle with real and fake tags (blue and red dots).
30–32	**Key line**	The only medium is your video presentation, in a two-tier violet caption.
32.4–36.2	**Behind the scenes**	Set and camera-monitor footage on a pink set; screen-in-screen; dark whip.
40.6–49.8	**Card carousel**	Flash, then a 3D carousel of sample videos revolves over the talent.
50–53.9	**Closing**	Talent points at camera. No on-screen button or end card.

Take from it

- Mostly constant framing: 9 of the 10 jump cuts that could be matched show no zoom change; the one exception is a pull-back to about 0.82× at 26.5 s. Variety comes mainly from overlays, not crops.
- Tonal pings are visible on the spectrogram near graphic entrances (12 found; median 0.37 s from the nearest visual event against 0.73 s for randomly shifted times). That is suggestive, not conclusive: about 6% of random shifts do as well.
- A 3D card carousel is an efficient way to show a portfolio over talent audio.

Watch out

- No CTA graphic or end card: add a button pill and a contact line.
- Real/fake tags and a falling-chart card are persuasive devices; keep any numbers shown real.

EDIT BREAKDOWN · R6

Oils brand intro

1:1 · 1080×1080 | 25 fps | 76 s | 29 shots · 23 cuts/min | A-roll 62% | reveal at 41% | median pause 0.18 s | -14.2 LUFS

Roll-call. For each product the pattern repeats: talent mentions it, a sunburst title pops, then a 2–4 s beauty shot on a seamless backdrop.

1.5 s · Hook: neon caption + slash

10.5 s · Ingredient chips, one per second

21 s · Market B-roll (pain)

28.6 s · Particle logo sting

31.5 s · Shipping-box shot

37.2 s · Product title + coconut pop

40.5 s · Product beauty shot

68 s · Gift-box A-roll

TIME (S)	ELEMENT	WHAT HAPPENS AND HOW IT IS TREATED
0–8	**Hook**	Warm set, talent seated; two bugs (agency top-left, client top-right). Neon caption box with a slash at 1 s, a second caption at 3 s.
8–13	**Ingredient chips**	Five rounded chips (coconut, olive, almond, black seed, castor) stack one per second.
15–19	**Cost caption**	Yellow caption: buying them separately… then pressure on the pocket.
20–24	**Pain B-roll**	Market oil bottles; a man studying his face in a mirror.
27.7–30.6	**Logo sting**	Purple ink-particle reveal on white, logo holds about 1 s, then fades.
30.7–33	**Box shot**	Shipping box with a slow drift.
34–60	**Product roll-call**	Coconut 36.5 s, olive 42 s, almond 53 s, castor shot 60 s, black-seed title 62 s. White flash at 47 s into a hair-care B-roll.
63–72	**Gift box**	Talent shows the boxed set, then a product shot of the box.
72–75.7	**Close**	Talent leans forward with boxes at his feet. No CTA graphic or end card in this cut.

Take from it

- The per-product beat is repeatable: mention, title pop, beauty shot, return to talent.
- Five chips at one per second turn a spoken list into a visual checklist.
- Two bugs (agency and client) sit on the frame for the whole piece.

Watch out

- Least dense speech (45% active, 98 pauses a minute): tighten pauses before adding more graphics.
- The top-left bug is partly cropped by the frame edge; keep bugs inside the safe margin.

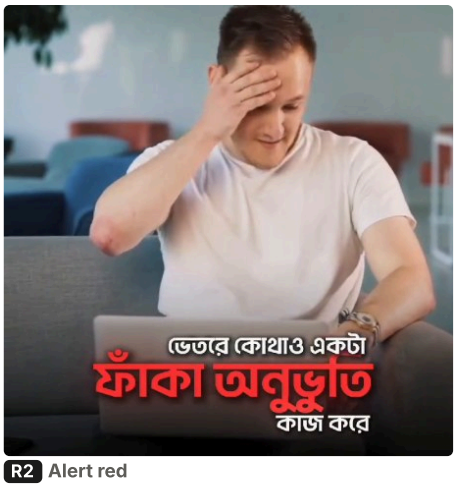

CAPTION SYSTEM

Two tiers, one idea at a time

A small lead-in line over a large key phrase in a heavy Bengali display face. The key phrase carries the colour; Latin brand names stay in Latin script inside the Bengali line.

R1 Neon navy
Cyan-white key with blue glow, gold sub-line

R2 Alert red
White lead-in, red key, dark outline

R3 Herbal green
Lime-green key, white sub-line, red burst marks

R4 Red-orange + rule
Key phrase, thin rule, gold sub-line

R5 Violet
Violet key with white outline and shadow

R6 Sunburst
Yellow-white key, cyan pill label, coconut pop

CAPTION SPEC (STARTING VALUES)

PROPERTY	VALUE	EVIDENCE
Key phrase size	About 6–9% of frame height, heavy weight	Observed on all six
Lead-in size	About 3–4.5% of frame height, regular weight, white or gold	Observed
Position	Lower third by default; upper third when a product, hands or UI fill the lower half; centred on full-screen B-roll	Observed
Copy length	2–5 words in the key phrase, one idea, at most two lines, held at least 0.7 s	Observed
Sync	Within about 0.1 s of the spoken word; keyword style, not full subtitles	Inferred
Keep clear	The face and the brand bug; check the brightest background frame for contrast	Observed

Caption wording seen in the hooks (plain-English gloss)

- **R2** “Which work is truly right for them” · “but it feels like something isn’t right” · “an empty feeling works inside” · “is this work really for me?”
- **R3** “Diabetes is not a disease to neglect” · “there is no such disease in the world…”
- **R5** “Everyone runs ads” · “they stop only at those ads” · “the only medium is your video presentation”
- **R6** “What a hassle, isn’t it?” (approximate) · “buying them separately” · “pressure on the pocket”

Pattern: the hook names a shared frustration in the viewer’s own words, then each caption advances one step of the problem.

CAPTION SYSTEM

How captions move

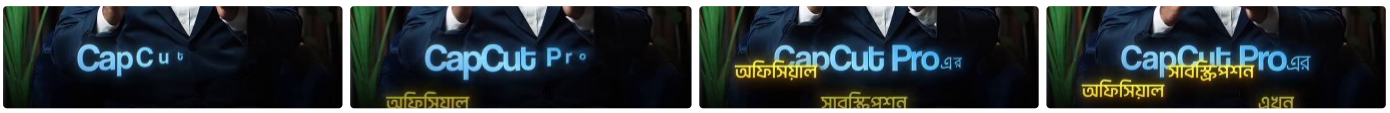

Frames are cropped to the caption band and shown in order. Timings are measured from the frame strips.

R3 **Word-by-word reveal, sub-line typed after the key word (about 0.09 s per word)**

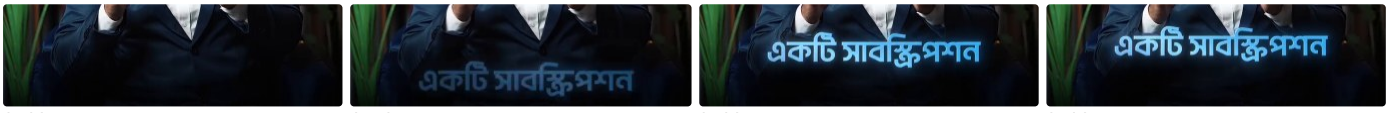

0.79 s · 0.96 s · 1.13 s · 1.30 s

R1 **Typed-letter neon reveal (about 0.08 s per letter), second tier slides in beneath**

5.00 s · 5.17 s · 5.34 s · 5.51 s

R1 **Fade-up with glow settle (about 0.2 s)**

31.60 s · 31.70 s · 31.80 s · 31.90 s

R4 **Hold, then a horizontal smear exit (under 0.1 s)**

4.07 s · 4.24 s · 4.41 s · 4.50 s

ENTRANCE AND EXIT RECIPES

MOVE	SETTINGS	ASS / EDITOR HINT
Word-by-word reveal	About 0.08–0.10 s per word (2–3 frames at 25–30 fps); each word scales in from about 118% to 100% over about 0.12 s	`\t(0,120,\fscx100\fscy100)`
Typed letters + glow	About 0.08 s per letter, soft outer glow in the key colour	Typewriter preset + glow
Fade-up	0.12–0.35 s fade with a small rise (about 18 px)	`\fad(120,100)` + `\move`
Smear exit	Under 0.1 s horizontal motion blur, or a hard cut	Slide-out + blur preset
Extras	Sticker or emoji near the key word; burst lines beside a shock word; a thin rule between tiers; a pill label with a coloured dot	Overlay track

COLOUR FOLLOWS THE BACKGROUND

LOOK	KEY	LEAD / SUB	EDGE	SEEN ON
Neon navy	White to cyan, blue glow	Gold	Outer glow	R1, dark sets
Alert red	Red (blue on cream, black on light blue)	White	Dark outline and shadow	R2, R4
Herbal green	Lime to green gradient	White	Soft shadow	R3, bright outdoors
Yellow outline	Yellow	White	Thin black outline	R4, blurred green
Violet	Violet	White	White outline and shadow	R5, purple set
Sunburst	Yellow-white	Dark text, cyan pill	Outline	R6, warm orange set

Sample the brand colour from the client's logo rather than copying these values.

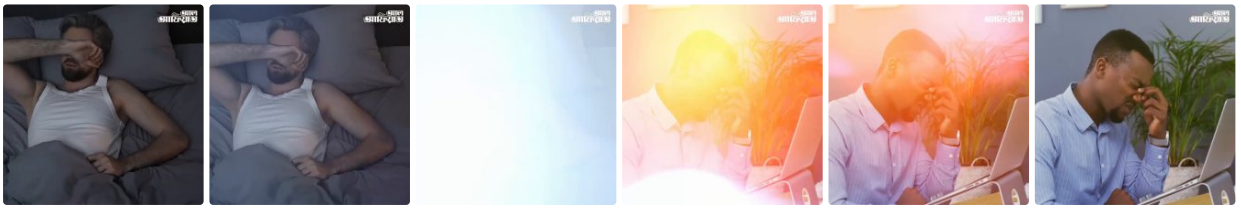

The transitions that carry the edit

Six frames per transition, in order. Pick by meaning rather than at random: a flash says “new scene”, an iris says “here is the product”, a dip says “look at this screen”.

R4 White / warm flash

0.3-0.5 s · Between unrelated scenes, a new person or a new topic

ffmpeg / editor: `fadewhite 0.3 + warm overlay`

R2 Iris / circle wipe

0.3-0.6 s · From talent to a product, mock-up or clean graphic

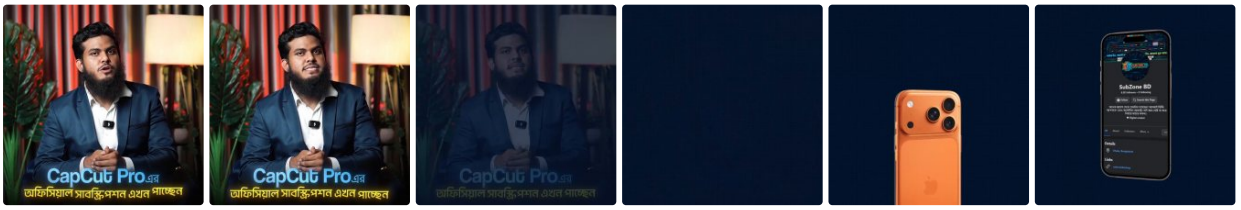

ffmpeg / editor: `circleopen 0.5`

R1 Dip to dark

0.4-0.8 s · Before a phone mock-up or a 3D object

ffmpeg / editor: `fadeblack 0.5`

R3 Colour-band wipe

about 0.4 s · Topic change in a brand-colour edit

ffmpeg / editor: `stacked wipeup / slide presets`

R4 Cross-dissolve

0.3-0.8 s · Talent into product; B-roll into B-roll

ffmpeg / editor: `dissolve 0.5`

More transitions and brand moments

R4 Radial zoom blur 0.12-0.25 s · Talent into a fast B-roll collage

ffmpeg / editor: `radial or zoomin 0.2`

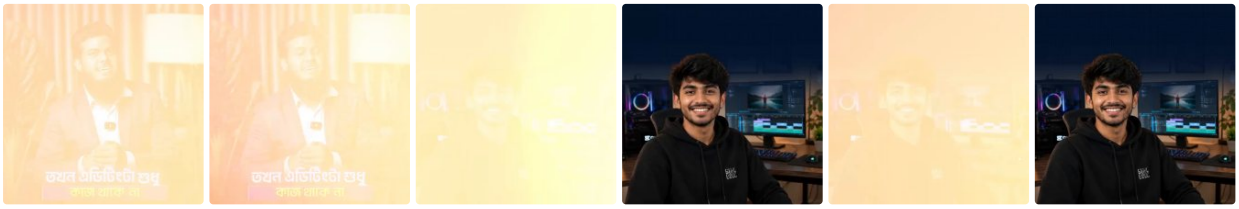

R3 Lens-flare dissolve about 0.7 s · Hiding a jump cut inside talent footage

ffmpeg / editor: `fadewhite + flare overlay`

R1 Strobe flicker 5 flashes in 0.5 s · Accent into a new person or hero moment

ffmpeg / editor: `drawbox white, mod(t,0.1)`

R6 Particle logo sting about 2 s reveal · A brand moment before the product box

ffmpeg / editor: `pre-made motion asset`

R5 Flash + 3D card entrance about 1 s · Social proof over the talent

ffmpeg / editor: `layered cards in the editor`

Editor preset names differ by app and version; map to the closest “flash / fade white”, “circle / iris”, “fade black”, “dissolve / mix”, “zoom” or “slide up” preset. The ffmpeg names are xfade transitions available in ffmpeg 6.1.

Graphics vocabulary

What was placed on screen, where it was seen, and how long it stayed. Timings are approximate (±0.5 s).

ELEMENT	TREATMENT	WHERE SEEN
Device labels	Small “Android / iPhone / PC” labels pop in under the talent for 1–2 s	R1 0.5–1.5 s
Phone mock-up	Slides in from the edge or rises from the bottom; shows a page, a social feed, or a product post	R1 7–8 s, 54 s · R5 5–9 s, 21–22 s
Chip stack	Icon plus label pills, one per spoken item, about 1 s apart; three to five chips	R1 15–17 s, 27–30 s · R6 8–13 s · R4 75–77 s
Plan badges	Three round badges (1 month, 6 months, 1 year) over the lower talent frame	R1 35–38 s
Sticker and burst	Cartoon face, burst lines, megaphone, slash; lands on the key word	R2 9 s · R3 1–2 s · R5 1 s · R6 1 s
Pill label with dot	White pill with a coloured dot: real / fake, or a product-type tag	R5 24 s · R6 36–60 s
UI micro-elements	Toast pill with a cursor click, loader-bar pill, chart card with a falling line	R5 2–4 s, 17–20 s · R1 50–52 s
Text panel	A teal card that holds at the bottom while B-roll changes above	R3 36–45 s
Certification line	Italic yellow caption over talent, held about 1–2 s	R4 61 s
Form card	Name, address and phone fields slide up in the lower third	R3 92–94 s
3D card carousel	Cards revolve over the talent for about 8 s, entered with a flash	R5 41–49 s
Product inset	Jar or box bottom-left with a heavy lower-third label, then fades	R4 58–62 s, 75–77 s

B-roll rules observed

- Show the noun being spoken; one clip about 2 s, one caption per clip.
- Stock clips get a slow push or drift of about 5–15% across their length.
- Mix real stock, flat 2D vector and 3D inserts to avoid a single texture.
- Run pain first (B-roll montage), then relief (product, mock-up, clean backdrops).

Product shots

- Seamless gradient or orange/white backdrop, slow dolly or push over 2–4 s.
- Hand-held product with a pointing gesture inside the A-roll.
- Unboxing: the shipping box with a slow drift before the first product.
- Book or bottle mock-ups rotate in 3D before the CTA still.

Voice-forward, tightly trimmed, mastered to −14

All six masters sit within 0.4 LU of −14 LUFS. Speech carries almost all of the energy; gaps between phrases are clean.

REFERENCE	LUFS	RANGE (LU)	PEAK (DBFS)	SPEECH ACTIVE	PAUSES/MIN	MEDIAN PAUSE (S)	90TH PCT (S)	LONGEST (S)
R1 Subscription promo	-14	2.4	+0.2	61%	69	0.18	0.37	0.65
R2 Career-book promo	-14.1	2.1	-0.1	73%	41	0.17	0.4	0.6
R3 Herbal product ad	-14.1	5	-2.4	71%	40	0.18	0.42	0.55
R4 Detox-tea ad	-14.4	4.2	-0.7	66%	44	0.15	0.31	5.01
R5 Agency pitch	-14.1	5	-0.1	57%	72	0.19	0.48	0.73
R6 Oils brand intro	-14.2	4.8	-0.1	45%	98	0.18	0.57	1.02

R1 exceeds 0 dBFS (+0.2); R2, R5 and R6 peak within 0.1 dB of full scale. Target −1 dBTP for new work. R4's 5 s "longest pause" is the quiet end card. R6's 98 pauses a minute reflect a slower, conversational delivery.

SOUND-EFFECT DETECTION (AUTOMATIC, CANDIDATES ONLY)

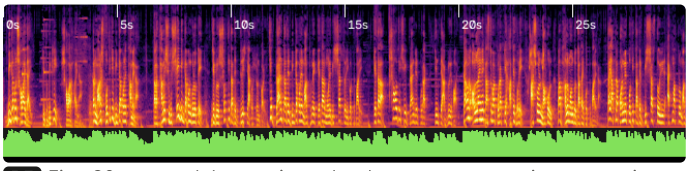

Pings are narrow fixed-pitch tones above 1.8 kHz lasting at least 70 ms. Hits are wide-stereo bursts. "Sync" compares each candidate's distance to the nearest visual event with 400 random time-shifts; a low share of shifts matching means the sync is probably real. A whoosh detector (long broadband noise bursts) found nothing in any video.

	PINGS	PING SYNC	HITS	HIT SYNC
R1	8	0.60 s vs 0.87 s by chance; weak (22% of shifts match)	25	0.66 s vs 0.82 s; weak (26%)
R2	0	none found	28	0.41 s vs 0.54 s; modest (4%)
R3	23	0.54 s vs 0.51 s; no sync	102	0.42 s vs 0.52 s; borderline (6%)
R4	3	too few to judge	27	0.42 s vs 0.59 s; weak (20%)
R5	12	0.37 s vs 0.73 s; suggestive (6% of shifts match)	19	0.74 s vs 0.68 s; no sync
R6	15	0.62 s vs 0.63 s; no sync	6	0.04 s vs 0.66 s; synced (0% of shifts match), only 6 events

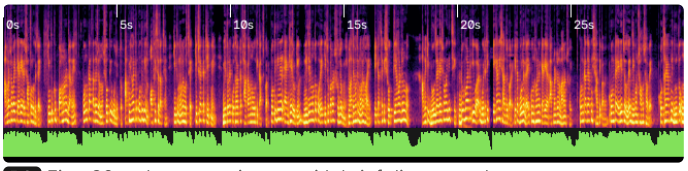

How to read this

Only one result is clear-cut: R6's six wide-stereo hits land within about 0.04 s of visual events. R5's pings are suggestive (visible tones, 6% of random shifts do as well) and every other row is weak or chance-level. Automatic detectors also fire on speech overtones, so the SFX layer in these edits is sparse and quiet, and exact effects cannot be named from the files. Treat sound effects as a light accent and confirm by ear before copying a specific cue.

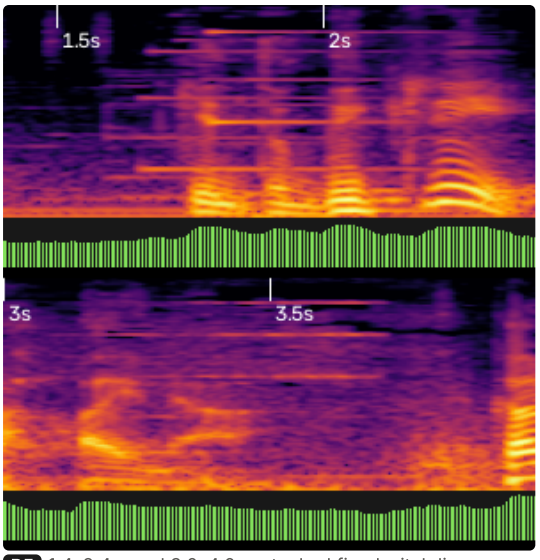

What the spectrograms show

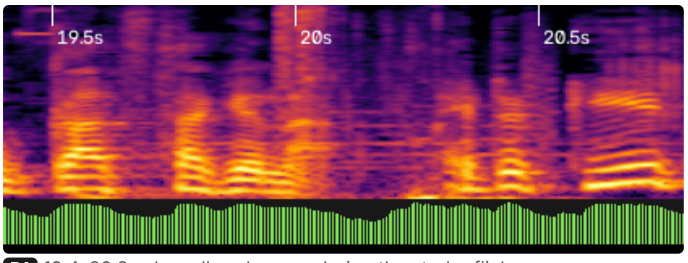

R5 First 30 s: speech harmonics only, clean gaps, no continuous music bed.

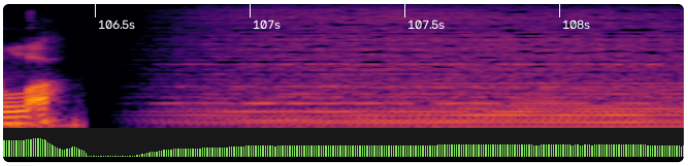

R2 First 30 s: the same picture, with brief dips at each cut.

R5 1.4–2.4 s and 3.0–4.0 s: stacked fixed-pitch lines as graphics appear (tonal pings).

R1 19.4–20.8 s: broadband smear during the strobe flicker.

R4 106.2–108.4 s: speech stops and a quiet pad runs under the end card.

CUE MAP (STARTING POINTS; LEVELS ARE RELATIVE TO THE VOICE)

MOMENT	CUE	CONFIDENCE
Graphic, chip or UI element appears	Short bright tonal ping or pop, 50–250 ms, about −14 dB under voice	Tones observed (R5, weaker in R1); timing suggestive only
Flash, iris or dissolve	Soft air whoosh, 0.4–1 s	Low: not detected
Cut to product	Short impact with wide stereo	Inferred (R6, 6 events)
End card or logo	Sustained pad or swell, 1–4 s	Observed (R4)

MIX RECIPE (FFMPEG 6.1 FILTERS; DRY-RUN ON A 5 S CLIP FIRST)

```
two-pass loudness : loudnorm=I=-14:TP=-1:LRA=7:print_format=json   → pass 2 with measured_* values and linear=true
duck a music bed  : [bed][voice]sidechaincompress=threshold=0.03:ratio=8:attack=20:release=350
place a cue       : [sfx]volume=-14dB,adelay=4000|4000        (milliseconds, both channels)
combine + protect : amix=inputs=3:normalize=0,alimiter=limit=0.89
```

Brand layer and CTA kit

Brand layer

- **Bug:** top-right, about 10–14% of frame width, about 3–4% margin; on for the whole piece except title and end cards. A client or agency bug goes top-left at the same size and stays inside the safe margin.
- **Contact layer:** a WhatsApp-style pill with the number at top-left (R3, from frame 0), or a pill that types in mid-video (R4, 44 s).
- **Tiled watermark:** a faint repeated number drifting across the frame (R3). It deters re-use but crosses the face; lower its opacity or keep it off the face area.
- **Logo sting:** particle or ink reveal on white, about 2 s in, 1 s hold, 0.3 s fade, then the first product shot (R6).
- **End card:** logo centred on white or navy, pops about 125% to 100% over 0.4 s, holds 3–5 s over a pad (R4).

CTA patterns seen

	CTA
R1	App icon, ORDER NOW pill, cursor click (50–52 s); phone mock-up end card
R2	ORDER NOW pill with a down chevron under the book (43–46 s)
R3	ORDER NOW pill (91 s) → form card (92–94 s) → large WhatsApp pill (95–98 s)
R4	WhatsApp pill at 44 s; logo end card 106.5–111.4 s
R5	Talent points at camera; no graphic CTA
R6	None in this cut; ends on talent

Recommended CTA stack

Button pill, then a form or contact card, then a contact pill that stays to the end: about 5–8 s in total. Add a 3–5 s logo end card when the piece is not a platform ad with its own button.

ORDER OF OPERATIONS FOR A CLEAN BRAND LAYER

#	STEP	WHY
1	Place the bug and contact layer on the top track before any captions	Captions can then be positioned around them
2	Set caption zones: lower third for talent shots, upper third when a product or hands fill the lower half	Avoids caption/bug/face collisions
3	Add the logo sting at the reveal and the end card last	Their length depends on the final runtime
4	Check every contact detail against the brief, character by character	A wrong phone number defeats the whole ad

TEMPLATE

Workflow and beat sheet

Ten steps

1. **Intake.** Product, offer, audience, CTA and contact, brand assets, aspect ratio (1:1 for feed, 9:16 for Reels), target length, editor.
2. **Beats.** Split the script into the beats on the right. One idea per beat.
3. **A-roll pass.** Trim pauses over about 0.6 s, alternate wide and tight crops.
4. **B-roll pass.** A visual for every concrete noun or claim.
5. **Captions.** Two tiers, keyword copy, colour per background.
6. **Graphics.** Product shots, mock-ups, chips, stickers, badges.
7. **Transitions.** By meaning: flash, iris, dip, dissolve.
8. **Sound.** Voice first, a few low cues, optional end-card pad.
9. **Brand and CTA.** Bug, contact layer, CTA stack, end card.
10. **Master and QC.** −14 LUFS, −1 dBTP, then the checklist.

Beat sheet (45–60 s default)

BEAT	TIME	CONTENT
Hook	0–3 s	Talent from frame 1; first caption by about 1 s; question or pain point
Stakes	3–15 s	Fast B-roll montage, about 2 s per clip, caption on each
Reveal	40–45%	Iris or flash into a clean product shot; logo pop
Proof	next 25–30%	Chips per feature, badges, certification text
Offer	next 10–15%	Big key-style offer line; urgency wording
CTA	last 5–8 s	Button, then form or contact card
End card	3–5 s	Logo pop and hold over a pad

Long form (about 110 s, R4) spends roughly half the runtime on the pain montage; brand-first edits (R1) reveal at under 10%.

PACING RULES (MEASURED)

22–33
shots a minute; median shot 1.05–2.2 s; B-roll clips about 2 s

≤ 2.5 s
longest static stretch: a cut, zoom, caption, chip or overlay changes the frame

0.15–0.19 s
median pause; cut any pause above about 0.6 s, land cuts on breaths

TEMPLATE

Edit Blueprint (fill in per project)

```
project:
  title: ""            brand: ""           language: bn
  aspect: 1:1          fps: 30             target_len_s: 50
brand_kit:
  logo: ""
  bug: {pos: top-right, width_pct: 12, margin_pct: 4}
  palette: {key: "", lead: "", outline: "", bg: ""}
  font_bn: ""          # ask the client; note a stand-in if unknown
  cta: {type: order-now | whatsapp | form, text: "", contact: ""}
beats:
  - id: hook
    t: [0.0, 3.0]
    layer: A-roll            crop: wide
    caption: {lead: "", key: "", style: ""}
    transition_out: hard_cut + punch 115%
    sfx: []
  - id: reveal
    t: [20.0, 26.0]
    layer: product B-roll + mock-up
    caption: {lead: "", key: "", style: ""}
    transition_in: iris_wipe_0.5
    sfx: [ping@reveal]
```

Cue sheet (one row per visual change)

TIME	LAYER	ELEMENT	CAPTION (LEAD / KEY)	TRANSITION	SFX	NOTE
0.0	A-roll	Hook, wide	…	cut + 115%	—	first caption ≤ 1 s

QC checklist and guardrails

Before export

- ☐ First caption or graphic by 1 s; no static stretch over 2.5 s.
- ☐ Median pause 0.2 s or less; no pause over 0.6 s inside speech.
- ☐ 22–33 shots a minute; B-roll clips about 2 s.
- ☐ Captions: two tiers at most, 2–5 key words, held 0.7 s or more, clear of faces and bugs.
- ☐ Captions readable on the brightest background frame, on a phone.
- ☐ Brand bug present and uncovered; contact details match the brief exactly.
- ☐ Loudness −14 LUFS integrated, true peak −1 dBTP or lower.
- ☐ No sound effect over a spoken word.
- ☐ End card 3–5 s; CTA stack visible at least 5 s.
- ☐ Export 1080 px on the short side, H.264 yuv420p, AAC 48 kHz, high bitrate (the references are recompressed and not a target).

Guardrails

Health and performance claims

R3 and R4 use strong health language (a condition “controlled” in a set time, “detox”, cancer and cirrhosis imagery). Do not reproduce such claims unless the client supplies substantiation and the copy meets the platform’s ad policy. Prefer wording about ingredients, usage and brand experience, and show certification text only when the certificate exists.

Use the style, not the assets

Do not reuse the references’ logos, phone numbers, watermarks, music or stock footage. Confirm licences for stock clips, fonts and audio.

Agree the plan first

Show the Edit Blueprint before a long render and say which items are inferred (SFX types, fonts, exact colours).

OPEN ITEMS

Corrections and what is still missing

Checked against the saved skill

ITEM	EARLIER STATEMENT	MEASURED NOW	ACTION
A-roll share, R3	20% from the automatic classifier, implying a 30–75% range	59% by hand count: the classifier tagged the second shooting location as B-roll	Use 27–78% as the range
Punch-in, R2	×1.06–1.14 and ×1.22	×1.14 and ×1.06 are solid (600–900 feature matches); ×1.22 had only 17 matches	Quote ×1.06–1.30 using R2 and R6 matches above 300; R4 ×1.07 (170 matches)
Peak level	"some were clipped"	R1 peaks at +0.2 dBFS; R2, R5, R6 at −0.1; R4 −0.7; R3 −2.4	Say "one video exceeds 0 dBFS, three sit within 0.1 dB of it"
Reveal timing	41–45% in four of six	Confirmed: R6 41%, R2 43%, R5 43%, R4 45% (R1 7%, R3 25%)	No change
Whoosh effects	Soft whoosh on transitions, low confidence	Detector found none in any video	Keep as optional and unverified
Framing, R5	R5 holds one framing	9 of 10 matched cuts show no zoom; one pull-back to about ×0.82 at 26.5 s	Say "mostly constant framing"
Pings, R5	Tones near graphics, "observed"	Tones are visible; 12 found, 6% of random time-shifts match as closely	Say "timing suggestive, not conclusive"
R1 labels	Device labels at about 1 s	Frame strip shows Android and iPhone labels from 0.5 s, PC by 1.5 s	Corrected in the R1 page

THE 12 LINKS IN YOUR TEXT FILE

Every link was refused when opened from this session (Facebook blocks automated reading), so none of them was analysed and nothing in this document is drawn from them. To include them, attach the videos as .mp4 files. Use the last column for your notes.

Questions that would sharpen the playbook

1. Which editor do you use (CapCut, Premiere, DaVinci, other), and is there a project file for any of these edits? That would give exact effect and sound names.
2. Which Bengali display font and brand colours do you use?
3. Which of the six are your own work, and which are references to imitate?
4. Can you attach the two large Drive videos (under 10 MB, or directly here) and the linked videos as files?
